Address
Dha phase 5, Islamabad

Education

Intermediate in Computer Science
Concordia College
2021 - 2023

BS Software Engineering
Ibadat International University
2023 - Continue

Skills

- HTML, CSS, Python, C++
- MS Office
- Problem-Solving
- Team Management
- Presentation Skills
- Canva Designer
- Bootstrap
- Wordpress
- Data Structures

Language

- English
- Urdu

Experiences

1st Semester — Programming Fundamentals Project

In my first semester, I developed a project as part of my Programming Fundamentals course. The project was a food ordering system created using C++ programming language. I wrote the code and implemented various features to allow users to place orders. This project helped me gain practical experience in software development.

2nd Semester — Course Management Website Project

In my second semester, I created a website for a course management system as part of my studies. Using HTML and CSS, I developed a model website that allows users to access course materials, notes, timetables, and tasks. The website was designed to help students manage their courses effectively and provided a user-friendly interface for easy navigation.

4th Semester — AI Health Analyzer Project

In my fourth semester, I am working on an AI project called 'Doctor AI Health Analyzer.' Using Python and the pandas library, I developed a system that collects user data, analyzes symptoms, and predicts potential health conditions. The system also provides medication recommendations and healthy diet suggestions based on the analysis. This project has enhanced my skills in data analysis, machine learning, and Python programming.
